

UK-based mobile application startup **PUSHLOOP Ltd** is seeking a:

JUNIOR MOBILE & WEB DEVELOPER

Start date: ASAP

Salary: £20-25k p.a. + pension, life insurance and health care

Position: Permanent

The company

We are a start-up company developing and marketing PUSHLOOP, a mobile business productivity and staff communications app. In addition, we provide mobile and web development resources to partner companies. We are based at offices close to Nottingham but strongly support home working and are looking to recruit a Junior Mobile & Web Developer.

The product

PUSHLOOP is an easy-to-use app that helps business and government keep their staff informed and safe. It enables them to keep communications with their staff open, up-to-date and secure. It also enables staff to gather information from anywhere and automatically sync it back to base and on to associated systems.

The role

This is an excellent career opportunity for a junior mobile web developer. Supporting the senior developers you will be involved analysing, designing, developing and delivering new and innovative features for our mobile and web platforms using a variety of tools. You will become part of tight team to drive the PUSHLOOP product into new and exciting markets through a significant development programme. The role will suit someone looking to extend their skills base and become involved in a broad range of technologies.

The applicant should be a confident and outgoing person looking to move to a full-time role that provides challenge and a real opportunity for growth. They will be self-motivated and understand the need to find a balance between creativity and quality.

The applicant should be educated to degree level (or equivalent) and have a minimum of a year's experience in at least 2 of the following areas:

- Objective C
- Java
- HTML5, CSS2/3, Javascript, JSON, REST/SOAP Webservices
- ASP.NET
- SQL design and use

In addition, there are a number of experiences that would also be attractive:

- Model View Controller (MVC)
- AWS or Azure
- ASP.NET Core
- Source control systems such as Git and SVN

- Use of web APIs and offline caching of web API data.
- Mobile build processes and store deployment

Contact

To be considered for this opportunity please email your CV in full confidence to vacancies@interchange.com as soon as possible. Closing date is 31/01/2017.

NO AGENCIES.
